Using the API.

Access: For User and API Account Management - Set runlater*user and runlater* password in the request headers. - The connection is accessed over SSL.

For Job Scheduling, Editting and Logging - Set runlater*key in the request headers. Runlater* key is the key attribute on the runlater API Account. - Set runlater*hash in the request headers. Runlater* hash is a base 64 encoded HMAC-SHA1 hash of the request body. - For GET and DELETE requests hash the URL i.e. "/jobs/".

All APIs return or take JSON where appropriate.

Jobs

GET "/jobs/" returns a JSON list of an API accounts jobs. POST "/jobs/" create and schedule a new Job. PUT "/jobs/id" edit a Job. GET "/jobs/id" get a Job. DELETE "/jobs/id" delete a Job.
